107 會考

When it wet, we need a towel to get ourselves dry. When a dog gets wet, all it needs is to shake its body. It showed that a wet dog can throw off half the water on its body by shaking for less than a second. If dogs works better than a washing machine. The study found that animal shaking begins with its tail. During a shake, the animal's head, body and skin all move. Smaller animals than bigger animals to get water off. For example, in one second, a rat can shake 18 times, a dog can shake 4 times. Bigger animals can get their bodies dry with fewer shakes. For animals, shaking is not just themselves dry. It is also about saving their lives. Being wet makes animals heavier, and that can make it hard to run. In the animal world, how fast an animal can run often decides whether it will live or not. The "wet-dog shake" has become a common habit of many animals.

skin 皮膚

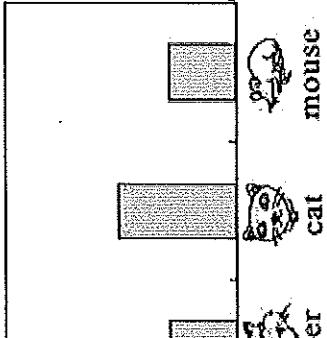

washing machine 洗衣機

Does the reading say about shaking?
Different animals' shaking begins with different body parts.
Shaking is a way that animals use to make other animals scared.
Animals that are not kept as pets do the shaking better than those that are.
Shaking themselves dry may help animals run faster in dangerous moments.

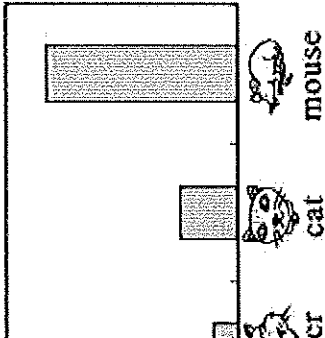

Can we learn from the reading?
The animal's tail can help it run more quickly and easily.
Some animals shake more than they need to get water off.
The idea of washing machines came from the shaking of dogs.
Larger animals get themselves drier at each shake than smaller animals

Our pictures below show how fast tigers, cats and mice can shake. From the reading, which picture is most likely correct? (選項在下一頁)

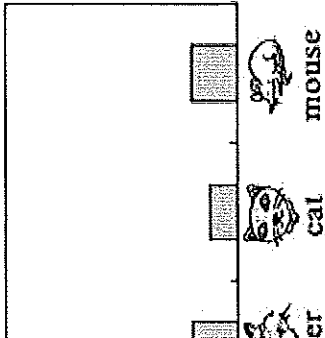

How fast can animals shake?

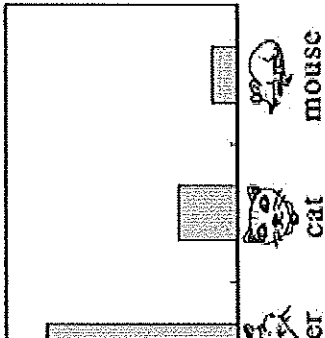

How fast can animals shake?

How fast can animals shake?

How fast can animals shake?
