For many people, having a cup of coffee right out of bed is the best way to start a day. But a report from Asap Science says otherwise. It says the worst time for coffee is soon after we get up. When we wake up, our bodies start to make cortisol. Cortisol helps us to think clearly and be quick to understand and act. The cortisol levels rise after we wake up and climb to the highest in about an hour. So there are two problems when we drink coffee during this time: (1) our bodies will make less cortisol, and (2) the cortisol will make coffee less useful. And that's why some of us drink more and more coffee.

Then, when's the best time to have coffee? When the cortisol levels are going down, the report says. Cortisol levels are usually highest between 8 a.m. and 9 a.m., between noon and 1 p.m., and between 5:30 p.m. and 6:30 p.m. So if you want to have coffee, enjoy it after these times, and this popular drink will help you the most.

What is the ketogenic diet? If you want to lose weight, you may have an interest in learning more about it. People will eat much oil and less sugar and rice when they choose the ketogenic diet. Eating a lot of oil helps a person not to feel hungry for a long time. At the same time, their bodies burn more fat by themselves when people stop eating sugar and rice.

To lose weight quickly, many people like to drink a kind of special coffee in the morning. They put a spoon of butter and a spoon of oil into black coffee. Then they drink one or two cups for breakfast, so they don't feel hungry until noon.

The ketogenic diet helps people lose a lot of weight fast, but it is quite dangerous. If you are on the ketogenic diet more than 1.5 months, you may be seriously sick. What's worse, you may gain a lot of your weight back after that in a short time. Remember to talk to your doctor before you give it a try.

What is the best way to lose weight? Exercise more and eat less. Though it sounds nothing special, it is the slower but safer way to lose weight and stay healthy at the same time.
